## A Message from the Executive Director

Feb. 11, 2021

Dear Residents & Family Members,

We are excited to share that Wilson Health Care Center is offering the latest in COVID-19 treatment, monoclonal antibody therapy. This infusion treatment has been shown to reduce the severity of COVID-19 symptoms and patients' rate of hospitalization, and was approved under the FDA's Emergency Use Authorization (EUA) status in November 2020. Wilson has successfully treated 15 people with monoclonal antibody therapy since we began offering it in partnership with CVS Pharmacy in late January.

In general, criteria for this treatment includes:

- Age 65-plus experiencing mild to moderate symptoms of COVID-19
- Chronic conditions that increase risk of hospitalization (includes obesity, diabetes, issues that compromise heart, lung, or kidney function or sickle cell anemia)

**What does this mean for you or a loved one who has tested positive with COVID-19?**

- **Residents of Wilson Health Care Center or Kindley Assisted Living** will automatically be evaluated to determine if the criteria is met for this treatment.
- **Residents of Residential Living** may contact Stephanie Sabine at 301-216-4337, who can help you facilitate this treatment process with your physician.

Sincerely,

Michele R. Potter  
Executive Director

***Doing all the good we can by providing exceptional  
lifestyle opportunities to those we serve.***
